LEARN BY DOING

Gain real-world experience through practical labs, simulated environments and hands-on projects.

PRACTICAL LABS

Work on real-world scenarios in a controlled lab environment.

NETWORK ANALYSIS

Analyze network traffic, protocols and security behavior.

VULNERABILITY ASSESSMENT

Identify, validate and document vulnerabilities in systems and applications.

ATTACK & DEFENSE

Experience real attack techniques and learn effective defense strategies.

SECURITY REPORTING

Document findings and create professional security reports.

TOOLS & TECHNOLOGIES

Get hands-on with industry-standard tools used by security professionals.

MODULES 01 - 04

STEP INTO OFFENSIVE SECURITY

Learn ethical hacking methodologies and master real-world attack and defense techniques.

01

Ethical Hacking Fundamentals

- Ethical Hacking & Penetration Testing
- Hacker Types, Attack Lifecycle & Methodologies
- Cyber Kill Chain & MITRE ATT&CK
- Scope, Authorization, Laws & Ethics

02

Footprinting & Reconnaissance

- Passive & Active Reconnaissance
- OSINT, WHOIS & DNS
- Search Engines, Social Media & Email Footprinting
- Subdomain & Attack Surface Discovery

03

Scanning & Enumeration

- Network & Host Discovery
- Port, Service & OS Scanning
- Nmap & Network Scanning Techniques
- SMB, DNS, SNMP & LDAP Enumeration

04

Vulnerability Assessment

- Vulnerability Identification & Classification
- CVE, CVSS & Vulnerability Research
- Automated Vulnerability Scanning
- Vulnerability Validation & Reporting

MODULES 05 - 08

BUILD A STRONGER DEFENSE

Dive deeper into data security, application security, cloud environments and real-world threats.

05

Cryptography & Data Security

- Encryption, Hashing & Digital Signatures
- Symmetric & Asymmetric Cryptography
- SSL/TLS, PKI & Certificates
- Data Protection & Secure Storage

06

Application & Web Security

- Web & Application Security Fundamentals
- OWASP Top 10 & Secure Development
- Authentication, Session & Access Control
- API Security & Secure Coding

07

Cloud & IoT Security

- Cloud Security & IAM
- Cloud Threats & Misconfigurations
- IoT Architecture, Threats & Security
- Security Controls for Cloud & IoT

08

Malware & Social Engineering

- Malware, Ransomware & Attack Techniques
- Phishing, Social Engineering & Human Risk
- Malware Prevention & Endpoint Protection
- Security Awareness & Response

MODULES 09 - 12

DETECT RESPOND RECOVER

Learn security monitoring, incident response, digital forensics and complete a real-world cybersecurity project.

09

SOC & Security Monitoring

- SOC Fundamentals & Security Operations
- Log Analysis & SIEM
- Threat Intelligence & IOC Analysis
- Security Alerts & Incident Detection

10

Incident Response

- Incident Response Lifecycle
- Detection, Analysis & Containment
- Eradication, Recovery & Reporting
- Incident Response Practical Exercises

11

Digital Forensics & Risk Management

- Digital Forensics Fundamentals
- Disk, Network & Log Forensics
- Risk Assessment & Vulnerability Management
- Security Audit, Policies & Compliance

12

Live Cybersecurity Project

- Security Assessment of a Simulated Organization
- SOC Monitoring & Incident Investigation
- Vulnerability Identification & Remediation
- Final Security Report & Presentation

CLEAR GUIDELINES

A structured and transparent learning experience for your growth.

**01**

Course Duration

The program is 6 months long, with structured learning, practical labs and a final project.

02

Eligibility

Open to students, working professionals and anyone interested in cybersecurity and ethical hacking. No prior experience is mandatory.

03

Admissions

Admission is confirmed only after successful registration and fee payment. Seats are limited and allocated on a first-come, first-served basis.

04

Fees & Payment

Course fees must be paid as per the institute's payment schedule. Fees once paid are non-refundable and non-transferable.

05

Attendance

A minimum of 75% attendance is required to be eligible for the final assessment and certification.

06

Certification

Students who successfully complete the course, required assessments and the final project will be awarded a government certification.

07

Code of Conduct

Students must follow ethical practices, maintain discipline and use the knowledge gained only for legal and responsible purposes.

08

Changes to Program

The institute reserves the right to update the curriculum, schedule or any other details if required. Any such changes will be communicated in advance.
